

International Science and Engineering Fair Forms

The Colorado Science and Engineering Fair is affiliated with the Regeneron International Science and Engineering Fair (ISEF) and with that affiliation comes the requirement that we have our students follow the Regeneron ISEF Rules and Guidelines for Pre-College Research. Also, CSEF has created a middle school version of these forms and rules. The form numbers are the same and they contain the same information as the Regeneron ISEF forms, but the layout of the forms is different. It is not the job of the Grand Award Judges to review these forms for compliance, as we have a Scientific Review Committee that does that and ALL projects that are set-up to display during judging on Thursday of the CSEF are cleared to compete.

However, there are a few forms that judges might be interested in reviewing during the judging process:

1. **Research Plan Attachment** - most of this information will be on the display board, but possibly not all of it if a student was working in one of the three sensitive areas of research: human subjects, vertebrate animals or potentially hazardous biological agents (which includes tissue work).
2. **Student Support Disclosure Form (2A)** - this is a new form for 2027 that outlines ALL adult support (Adult Sponsor, Direct Supervisor, Qualified Scientist, etc.) given to the student, including the time, expertise, contribution and relationship to the student.
3. **Regulated Research Institutional/Industrial Setting Form (2C)** - this is the form that is used to divulge what work the student did if they worked at a research institution (like a university) or an industrial setting (like a dentist's office).
4. **Continuation Form (7)** - if a student does a multiyear project, they are required to disclose what is different from previous years' work and **they MUST ONLY be judged on THIS YEAR'S project,** but they may have information (not on the display board) at their project related to previous work.
